

Area of a Triangle

A triangle is $\frac{1}{2}$ of a rectangle, so we can use the same formula, then divide it by $\frac{1}{2}$

$$(3 \times 4) \div 2 =$$

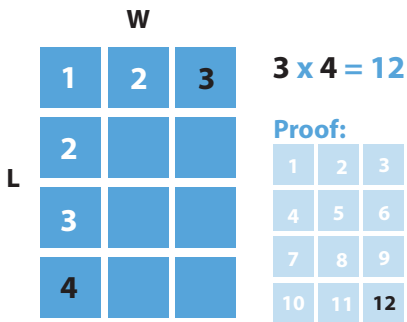

$$(3 \times 4) \div 2 =$$

$$\downarrow$$

$$12 \div 2 = \underline{\quad}$$

$$12 \div 2 = 6$$

Remember, the area of a rectangle is $L \times W$

Now, measure some triangles and try these:

1

$$(\underline{\quad} \times \underline{\quad}) \div 2 =$$

$$(\underline{\quad}) \div 2 =$$

4

$$(\underline{\quad} \times \underline{\quad}) \div 2 =$$

$$(\underline{\quad}) \div 2 =$$

2

$$(\underline{\quad} \times \underline{\quad}) \div 2 =$$

$$(\underline{\quad}) \div 2 =$$

5

$$(\underline{\quad} \times \underline{\quad}) \div 2 =$$

$$(\underline{\quad}) \div 2 =$$

3

$$(\underline{\quad} \times \underline{\quad}) \div 2 =$$

$$(\underline{\quad}) \div 2 =$$

6

$$(\underline{\quad} \times \underline{\quad}) \div 2 =$$

$$(\underline{\quad}) \div 2 =$$
